SSH keys

This is a list of SSH keys associated with your account. Remove any keys that you do not recognize.

Authentication Keys

Have practice 1
SHA256:1b4b42b8237d0c9b81e53e3vd6fLT3h3wEPH4ME
Added on Mar 15, 2023
Never used — Read/write

Check out our guide to [generating SSH keys](#) or [troubleshoot common SSH problems](#).

GPG keys

There are no GPG keys associated with your account.
Learn how to [generate a GPG key](#) and [add it to your account](#).

Vigilant mode

Flag unsigned commits as unverified
This will include any commit attributed to your account but not signed with your GPG or S/MIME key.
Note that this will include your existing unsigned commits.

Code Issues Pull requests Actions Projects Wiki Security Insights Settings

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH git@github.com:enmanuel3214/Practica1.git

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# Practica1" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M master
git remote add origin git@github.com:enmanuel3214/Practica1.git
git push -u origin master
```

...or push an existing repository from the command line

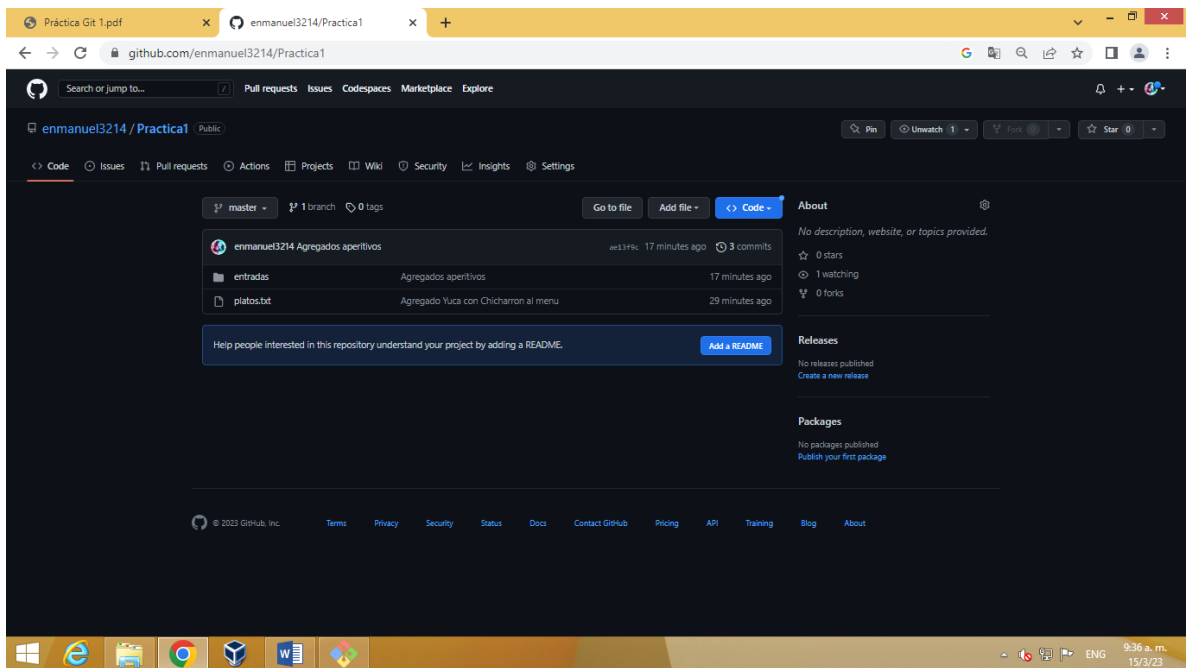

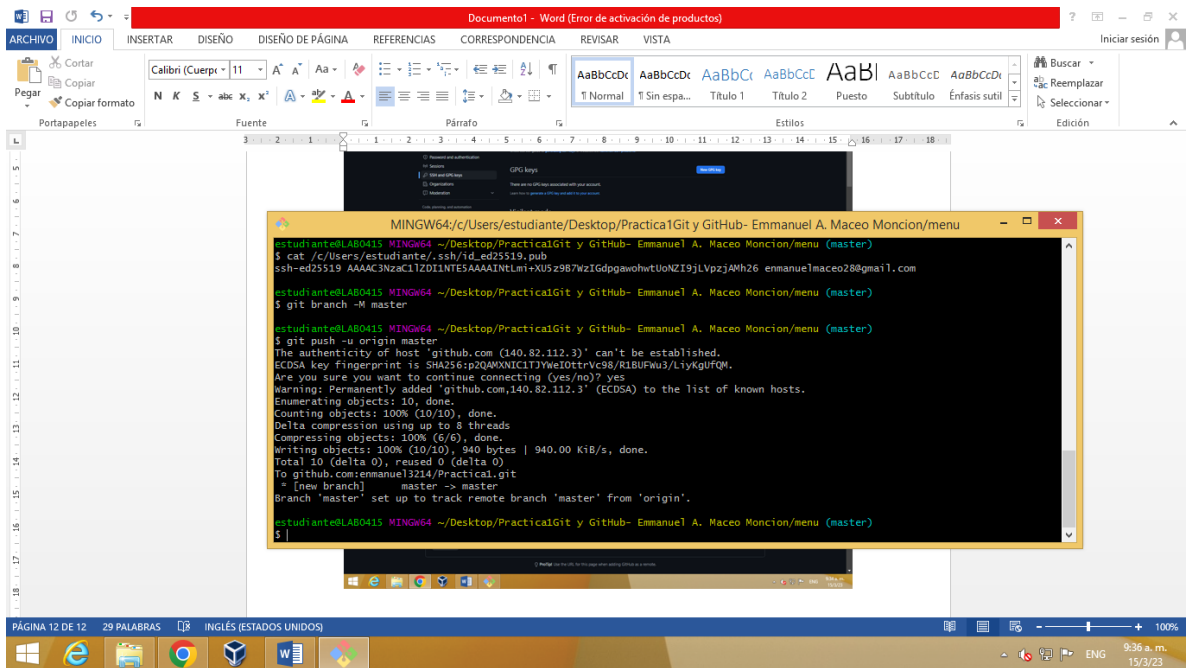

```
git remote add origin git@github.com:enmanuel3214/Practica1.git
git branch -M master
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Import code

ProTip! Use the URL for this page when adding GitHub as a remote.
